

FN CHAIRS

2026 • CHAIR • BOOK

An innovator of hardwood chair design, FN Chairs began manufacturing chairs in 1995. Started by Freeman Miller, this family owned and operated business has pioneered its way to bringing its customers a wide range of styles with an

emphasis on comfort, quality materials and superior Amish craftsmanship.

With a second generation of family now involved, FN Chairs is committed to many years of leadership in design, manufacture and customer satisfaction.

The Nature of Wood and its Environment

All hardwood has variation in its color and grain. In manufacturing and finishing its chairs, FN Chairs strives to bring out the natural beauty and character of each piece of wood. These wood characteristics give each piece of solid wood furniture its unique charm, and, although the finishing processes are identical, no two pieces will be exactly the same.

Because most hardwoods are open grained, solid wood furniture will expand and contract with changes in humidity and temperature, even after protective finishes have been applied. Care in controlling the furniture's environment will help minimize the minor cracking and warping that is a natural part of the wood's character.

Indoor humidity should be kept in the 35 to 40 percent range to minimize these effects. If the humidity moves out of the ideal range, solid wood chairs can expand or contract causing a split in the wood grains of the chair seats.

Additionally, direct sunlight and fluorescent fixtures that contain ultra-violet rays can cause chemical changes in the wood and finish and should be avoided. Furniture should also be kept away from direct sources of heating and cooling and out of attic or basement storing environments.

With proper care, solid wood furniture will provide a lifetime of enjoyment and can be passed on to future generations.

The Meticulous Creation of the

Double Bent Barrel

Select trees are harvested from a managed forest. Logs are taken to a local mill to be cut into boards. Only the best will do for this meticulous process.

75% of the log can be made into furniture grade lumber, however we can only use the very best. 20-25% of the boards will meet the required specifications. Those boards are then cut to 5/4 thickness and brought to our facility. Here they will air dry/kiln dry to the perfect moisture content of 14%.

Once dried, the 5/4 board is split in half. The two pieces are then bent using radio frequency technology. At this time, the pieces are dried in a radio frequency press for approximately 35 minutes to a moisture content of 6-7%. This process hardens the wood keeping the beautiful curves.

The two pieces then have a glue line cut made to book match them back together with grain that mirrors each other. The creation must then be hand-sanded to ensure a perfect stain.

Thus the creation of the Double Bent Barrel back.
